DEVIXO SOLUTIONS

Web Development Internship Program

TASK 02

Interactive Business Website

Project Report

Detail Information

Student Name	Sania Shoukat
Internship Domain	Web Development
Task Number	Task 02
Technologies	HTML5, CSS3, JavaScript (Vanilla)
University	University of Agriculture Faisalabad
Date	18 October 2026

1. Objective

The objective of this task was to design and build a fully responsive, multi-page business website using HTML5, CSS3 and vanilla JavaScript. The website had to have five pages (Home, About, Services, Portfolio and Contact) and at least six interactive JavaScript features.

The task also had some rules. The website needed a responsive layout, a modern UI/UX, a consistent color scheme and an organized folder structure. The task asked for HTML5, CSS3 and vanilla JavaScript, so I did not use any framework or library. All the HTML, CSS and JavaScript in this project is written by me.

As the business for the website, I created a small web design and digital marketing agency called BrightCraft Digital. Apart from the required features, I also added some extra features: a live project estimate calculator, service and team pop-up windows, a portfolio filter and scroll animations.

2. Technologies Used

This website is built with three core technologies. No framework and no JavaScript library was used.

Technology / Tool	How I used it
HTML5	Page structure for all five pages using semantic tags such as header, nav, section and footer.
CSS3	All styling, Flexbox and Grid layouts, gradients, media queries for responsive design, hover effects, transitions and animations.
CSS Variables	Stored the color palette, gradients and fonts in one place (:root) with a second set for dark mode, so the theme stays consistent on every page.
JavaScript (Vanilla)	All interactive features: DOM manipulation, event listeners, form validation, localStorage, timers and the IntersectionObserver for scroll animations.
Google Fonts	Poppins for headings and Open Sans for normal text.
Visual Studio Code	Code editor used to write and organize the project files.
Web browser tools	Used the browser developer tools to test the layout at different screen sizes.
Git and GitHub	Version control and storing the project repository.

3. Website Structure

The website has five separate pages. Every page shares the same navigation bar, footer, dark mode button and scroll-to-top button, so the site feels like one project.

Page	File	What it contains
Home	index.html	Hero section with a typing animation, animated counters, featured projects, why choose us, testimonials slider, about strip, how we work steps and a call-to-action banner.
About	about.html	Our story, values, a team grid with member details pop-up, and a journey timeline.
Services	services.html	Instant project estimate calculator, six service cards with a View Details pop-up, and the simple process steps.
Portfolio	portfolio.html	Project cards with category filter buttons.
Contact	contact.html	Contact details, contact form with validation, and an FAQ accordion.

Folder structure

The project files are kept in a clean folder structure like this:

```
business site/
|-- css/
|   `-- style.css
|-- images/
|   |-- greenview-realtors.png
|   |-- hero.png
|   |-- learnify-tutoring.png
|   |-- meher-boutique.png
|   |-- our-story.jpg
|   |-- pulsefit-gym.png
|   |-- roast-and-co.png
|   `-- spice-route.png
|-- js/
|   |-- home.js
|   `-- script.js
|-- about.html
|-- contact.html
|-- index.html
|-- portfolio.html
|-- readme.md
`-- services.html
```

4. Design Approach

Color theme

I wanted the website to look modern and friendly, so I chose a purple-to-pink gradient theme. The same colors and the same gradient are used on every page, in both light mode and dark mode, so the website looks consistent. The text colors have good contrast on the light and dark backgrounds.

	Colour	Code	Where it is used
	Deep purple	#3B1A78	Headings and dark accents
	Violet	#7C3AED	Buttons, links, active menu item and gradient start
	Magenta	#C026D3	Middle of the gradient
	Pink	#F472B6	End of the gradient
	Raspberry	#DB2777	Small accent text such as section tags
	Light lilac	#FDF7FF	Page background in light mode
	White	#FFFFFF	Cards and surfaces in light mode
	Dark plum	#1E1033	Page background in dark mode
	Dark card	#2D1B4E	Cards and surfaces in dark mode

Typography

I used two fonts from Google Fonts: Poppins for headings and Open Sans for normal text. Using only two fonts keeps the design simple and easy to read.

Layout and spacing

The page layouts are built with CSS Grid and Flexbox. Every page uses a centered container with a maximum width of 1150px, and every section has the same vertical padding, so the spacing looks equal everywhere. Cards have rounded corners and soft shadows, and the section backgrounds change between plain and a very light gradient, which makes it easy to see where one section ends and the next one begins.

Responsive design

The website uses media queries at three main breakpoints: 900px, 700px and 560px. At 900px the card grids change from three or four columns to two, and the hero, about and contact layouts stack vertically. At 700px the navigation links move into a hamburger menu button and form fields stack. At 560px the remaining grids become a single column. The contact form and all cards stretch to the full width of the screen on small devices.

Animations and hover effects

I kept the animations smooth and simple:

- The hero headline types and deletes rotating phrases, and the statistic numbers count up.

- Cards and steps fade and slide in when they scroll into view, using the IntersectionObserver.
- In the How We Work section a gradient line fills across the steps, and the number circles pop in and float.
- Cards lift up on hover, and the service cards in Our Simple Process get a sweeping gradient border.
- A prefers-reduced-motion rule turns off the decorative animations for users who do not want them.

5. JavaScript Features

The website has 13 interactive features. Eight of them match the features listed in the task, and the other five are extras that I added.

Task features

No.	Feature	Page	How it works
1	Responsive navigation menu	All pages	A hamburger button opens and closes the menu on screens below 700px. The menu closes when a link is clicked.
2	Dark mode	All pages	A toggle button switches the whole theme. The choice is saved in localStorage and restored on the next visit.
3	FAQ accordion	Contact	Clicking a question opens its answer and closes the other answers.
4	Form validation	Contact	Checks the name, email format, subject and message length. Shows an error under each wrong field and a success message when everything is correct.
5	Scroll-to-top button	All pages	The button appears after scrolling down 350px and scrolls smoothly back to the top.
6	Animated counters	Home	The numbers (projects, clients, years, team members) count up when the stats section comes into view.
7	Typing animation	Home	The hero headline types and deletes a list of phrases in a loop.
8	Testimonials slider	Home	Client testimonials change automatically every 6 seconds. Visitors can also use the arrow buttons and the dots.

Extra features

No.	Feature	Page	How it works
9	Service details pop-up	Services	Clicking a service card opens a pop-up with the service description, what is included, the price and the delivery time. It closes with the close button, a click outside, or the Esc key.
10	Instant estimate calculator	Services	The visitor picks a service, complexity, timeline and size, and the price range, delivery time and cost breakdown update live.
11	Team member pop-up	About	Clicking a team card opens a pop-up with the person's role, bio and focus areas.
12	Portfolio filter	Portfolio	Filter buttons show only the projects of the selected category.
13	Scroll-reveal animations	Home, About, Services	Steps, values and process cards fade in one after another when they scroll into view.

6. Task Requirements Checklist

Requirement	How it is done
Pages: Home, About, Services, Portfolio, Contact	All five pages are built and linked with the same navigation bar.
HTML5, CSS3, JavaScript (Vanilla)	Only these three technologies are used. No framework or library.
At least 6 JavaScript features	13 interactive features are implemented (see Section 5).
Responsive design	Media queries at 900px, 700px and 560px, a hamburger menu on mobile and flexible grids.
Modern UI/UX	Gradient theme, cards, smooth animations, hover effects, dark mode and clear call-to-action buttons.
Consistent color scheme	One gradient theme stored in CSS variables, with a matching dark mode.
Organized folder structure	Separate css, js and images folders, with the HTML pages and readme.md in the root.

7. Code Screenshots

This section shows some important parts of my code, taken from Visual Studio Code.

HTML: navigation bar

```html
<header class="site-header">
  <nav class="navbar">
    <a href="index.html" class="logo">Bright<span>Craft</span></a>

    <ul class="nav-links" id="nav-links">
      <li><a href="index.html" class="active">Home</a></li>
      <li><a href="about.html">About</a></li>
      <li><a href="services.html">Services</a></li>
      <li><a href="portfolio.html">Portfolio</a></li>
      <li><a href="contact.html">Contact</a></li>
    </ul>

    <div class="nav-actions">
      <button class="theme-toggle" id="theme-toggle" title="Toggle dark mode" aria-label="Toggle dark mode">🌙</button>
      <button class="nav-toggle" id="nav-toggle" aria-label="Toggle menu" aria-expanded="false" aria-controls="nav-links">
        <span></span><span></span><span></span>
      </button>
    </div>
  </nav>
</header>
```

Figure 1: HTML code of the navigation bar

CSS: color variables for light and dark mode

```css
:root {
  --primary: #3B1A78;
  --primary-light: #7C3AED;
  --accent: #7C3AED;
  --accent-dark: #DB2777;
  --bg: #FDF7FF;
  --surface: #ffffff;
  --text: #2A1747;
  --muted: #6B5B82;
  --border: #F0DCF7;
  --grad: linear-gradient(135deg, #7C3AED 0%, #C026D3 55%, #F472B6 100%);
  --grad-dark: linear-gradient(120deg, #7C3AED 0%, #C026D3 55%, #F472B6 100%);

  --font-head: 'Poppins', 'Segoe UI', Arial, sans-serif;
  --font-body: 'Open Sans', 'Segoe UI', Arial, sans-serif;

  --radius: 8px;
  --shadow: 0 2px 12px rgba(124, 58, 237, 0.10);
  --transition: 0.25s ease;
}

body.dark-mode {
  --bg: #1E1033;
  --surface: #2D1B4E;
  --text: #e7eaf0;
  --muted: #b3a6c9;
  --border: #4C2F7E;
  --accent: #A78BFA;
  --accent-dark: #F472B6;
  --grad: linear-gradient(135deg, #8B5CF6 0%, #D946EF 55%, #F472B6 100%);
  --grad-dark: linear-gradient(120deg, #8B5CF6 0%, #D946EF 55%, #F472B6 100%);
  --shadow: 0 2px 10px rgba(0, 0, 0, 0.4);
}
```

Figure 2: CSS variables for the color theme and dark mode

CSS: responsive navigation with a media query

```css
@media (max-width: 700px) {
  .nav-links {
    position: absolute;
    top: 100%;
    left: 0;
    right: 0;
    background-color: var(--surface);
    flex-direction: column;
    gap: 0;
    max-height: 0;
    overflow: hidden;
    transition: max-height 0.3s ease;
    box-shadow: var(--shadow);
  }

  .nav-links.open {
    max-height: 400px;
  }

  .nav-links a {
    display: block;
    padding: 14px 24px;
    border-bottom: 1px solid var(--border);
  }

  .nav-toggle {
    display: flex;
  }

  .section { padding: 50px 0; }
  .section-title { font-size: 1.6rem; }
  .hero-text h1 { font-size: 2rem; }
  .form-row { flex-direction: column; gap: 0; }
}
```

Figure 3: Media query that turns the links into a mobile menu

JavaScript: dark mode toggle

```javascript
const themeToggle = document.getElementById("theme-toggle");
const savedTheme = localStorage.getItem("theme");

if (savedTheme === "dark") {
  document.body.classList.add("dark-mode");
  if (themeToggle) themeToggle.textContent = "☀️";
}

if (themeToggle) {
  themeToggle.addEventListener("click", function () {
    document.body.classList.toggle("dark-mode");
    const isDark = document.body.classList.contains("dark-mode");
    localStorage.setItem("theme", isDark ? "dark" : "light");
    themeToggle.textContent = isDark ? "☀️" : "🌙";
  });
}
```

Figure 4: JavaScript code for dark mode with saved choice

JavaScript: contact form validation

```
function isValidEmail(value) {
  return /^[^\s@]+@[^\s@]+\.[^\s@]+$/.test(value);
}

contactForm.addEventListener("submit", function (e) {
  e.preventDefault();

  const name = document.getElementById("cf-name");
  const email = document.getElementById("cf-email");
  const subject = document.getElementById("cf-subject");
  const message = document.getElementById("cf-message");

  let valid = true;

  if (name.value.trim().length < 2) {
    setError("group-name", true);
    valid = false;
  } else {
    setError("group-name", false);
  }

  if (!isValidEmail(email.value.trim())) {
    setError("group-email", true);
    valid = false;
  } else {
    setError("group-email", false);
  }

  if (subject.value.trim().length < 3) {
    setError("group-subject", true);
```

11. Challenges and Solutions

Challenge	How I solved it
Keeping one color scheme on all five pages and in dark mode.	I stored all colors and the gradient in CSS variables, with a second set for dark mode. Changing the theme now needs only one edit.
The contact form was narrower than the screen on tablets and phones.	In the responsive CSS I made the form box and the contact info stretch to the full width when the layout switches to one column.
The View Details buttons on the Services page did nothing.	I wrote the pop-up code in JavaScript. It reads each service's details from one data list and fills the pop-up when a card is clicked.
Some animated sections looked crowded or overflowed their cards.	I redesigned them: How We Work became a timeline with a gradient line, and the process cards got a sweeping gradient border, with all animations kept inside the section using CSS.
Styles and scripts were spread over many files.	I merged the extra stylesheet into one style.css and moved the files into css, js and images folders.

12. Conclusion

In this task I built a complete five-page business website using HTML5, CSS3 and vanilla JavaScript. The website has all the required pages, a consistent gradient color scheme with dark mode, a responsive layout for desktop, tablet and mobile, and 13 interactive features, which is more than the six that the task asked for.

While doing this task I learned how to connect JavaScript with the page using the DOM and events, how to save a visitor's choice with localStorage, how to validate a form, and how to trigger animations when an element scrolls into view. I also learned how useful CSS variables are for keeping one theme across many pages, and how an organized folder structure makes the project easier to update.

Overall this task helped me improve my front-end skills and gave me a bigger, more interactive project that I can add to my portfolio.

13. GitHub Repository Link

GitHub Repository: https://github.com/saniashoukat261/brightcraft.git

Deployed link: https://brightcraft-pearl.vercel.app/

The repository contains the HTML source code, the CSS source code, the JavaScript files, the images, this PDF report and the readme.md file.
